

**SCOPE**

Situated within the field of urban climatology and related disciplines, the conference will offer an opportunity to present findings from past and on-going research projects as well as practical applications in planning and implementation. The conference also aims at providing a platform to network and strengthen the exchange of the Swiss research, service, and implementation community focussing on the multifaceted interactions between cities, climate (change), and human health.

.....

**VENUE**

University of Bern, Hochschulzentrum vonRoll

.....

**CONTRIBUTIONS**

We invite contributions on all aspects related to urban heat, from measurement-based approaches over modelling and simulation studies to research on heat mitigation or impacts on human health. We particularly encourage interdisciplinary submissions and contributions from young researchers. Most contributions will be in poster format and may be presented within three scientific sessions covering: 1) mitigation and impacts, 2) monitoring and measurements, and 3) modelling and simulations.

.....

**ABSTRACT SUBMISSION AND REGISTRATION**

Abstract submission (deadline 16 June 2024) and registration (deadline 14 August 2024) see [conference website](#).

The conference is free, registration is required.
